

Atmospheric phenomena in time lapse photography

Veikko Mäkelä

halo and atmospheric meeting

Artjärvi, 14.–16.7.06

Details

- Project of Astronomical Association Porin Karhunvartijat in Western Finland
- Original project time one year (1.1.2005–1.1.2006), but system is still working
- Olympus Camedia C-740 Ultra Zoom camera in heated "weather box"
- Camera located on the roof of The Ulvila Water Tower (outside the observatory of the association)
- Camera is computer controlled with Cam2Com software, which design for the remote control of Olympus digicameras

- Facing direction WNW (not optimal for eg. aurorae, NLC), but it is direction of town Pori
- One image per minute, total images over half a million in a year
- Image stored into tens of DVDs
- What have been caught:
 - clouds, rain, sunshine, fog, and other weather phenomena
 - astronomical phenomena: Sun, Moon, planets, stars
 - animals: birds, flies, spiders :-)
 - Atmospheric phenomena:
 - NLCs, aurorae
 - rainbows, fogbows, ordinary halos
 - pollen coronae
 - sunset colors
